Appendices

Methodology for Field Code Assignments

Purpose

The purpose of the Field Code Master List (FCML) effort is to provide the Energy Information Administration (EIA) and others with standardized field name spellings and associated codes for all crude oil and natural gas fields throughout the United States. The names and codes are compiled during the research phase on a computerized Field Code Master File (FCMF), which is updated periodically as new information on oil and gas fields is obtained and processed by EIA. The published and electronic versions of the *Oil and Gas Field Code Master List* are derived from the FCMF. The first edition of the Master List was published by EIA in December 1982.

General System Overview

The system also incorporates a Field Code Working File (FCWF) for the development and verification of new field information. The FCWF is updated as information about the field is obtained. Periodically all fully resolved records are extracted from the FCWF and moved to the FCMF. Once this FCMF "update" is completed, the resolved records are deleted from the FCWF.

Field Information Research

Geologists and petroleum engineers are responsible for supervising research and final resolution of field information. Listings of the FCWF can be produced by region for review. There are several possible explanations why field information under review is not already listed on the FCMF. This could reflect the following:

- A relatively recent oil or gas field discovery
- A recently discovered extension of an old field into a new county or State
- An alias used for the official name
- An error exists in the reported information.

The official recognition of a new field discovery by a State or Federal field naming authority is a prerequisite for the assignment of an official EIA field code. Table 1 on page 247 lists these naming authorities. Information regarding State recognition is obtained through official State publications and computer tapes, or through other contact with the State agencies.

If the field name in question has not been officially recognized, several sources of information exist for further investigation into the third and fourth possibilities listed above. These include:

- Analysis of State data files (the Texas and New Mexico files, for example, contain detailed information for each field and operator)
- Review of oil and gas industry publications and computerized data bases
- Telephone contact with the source of the information.

State Source Review Procedures

State sources provide most of the field names. As State publications are released they are routinely reviewed. The information regarding new fields is compared to the information on the FCMF. If the FCMF does not contain the new field, the field name and associated information are placed on the Working File. Subsequent to adding batches of records to the Working File, edit check reports are returned to the analyst that identify missing, inconsistent, or duplicative information on the Working File. The analyst then provides update transactions to correct the problems as appropriate, and a field code is assigned. Periodically, a supervisory analyst reviews those Working File records in which error-edits have been resolved for consistency of assigned field names and field codes with the EIA standards. Then the resolved records are moved to the Master File.

The quality and quantity of information available through the State publications varies. Some States publish new field information relatively frequently (*e.g*., monthly) in a format that is easily reviewed for incorporation into the FCMF. Routine processing of State sources begins with these publications. Additional State publications, such as State geological papers, are also included in these routine reviews. Periodically, all FCMF records for a State are compared to the most recent State publication.

Some States do not publish field information, or the field information is not carried in the latest publication but in a previous one. In an overall review of the FCMF, when a particular field is not found in any available State publication, the source **NISP** (not in State publication) is coded into the source section of the FCMF. When an earlier State source reports “No Production”, “No Reports”, or some similar remark for one or more years, and does not show the field in subsequent sources, the field is still considered to be official, whether it is presently producing or not. When a field is found in an older State source in combination with, or in subordination to, another field name, the State is contacted and asked to clarify the status of the field. This research resolves most of the **NISP** records, allowing them to be finally categorized as a master field record (with a field naming authority source), as an alias field record, or as an invalid field record. Certain field records, representing field names assigned by non-field naming authority publications that were coded prior to initiation of production in a field, and were subsequently abandoned without recorded production, have been classified as invalid.

Assigning New Field Code Numbers

A sequential listing of unused field code numbers is referenced in assigning new 6-digit field name codes. For field names that are already in use, either in another State or in a different section of the same State, the same code can be assigned to the new field entry. When the field name is completely new, the first available code (numerically lowest) is assigned and is therefore linked with the field name regardless of alphabetization, with the following exception: codes 800000-999998 are excluded from sequential code assignments, as they are reserved for offshore Gulf of Mexico fields.

Field Alias Procedures

A field alias is an unofficial name for an oil and gas field. The analyst detecting that a field name should be recorded as an alias name specifies a successor field name. Initially, the successor name is a master field name, but over time, the successor field name might also become an alias name. When that occurs, both unofficial field names are shown in the FCML and both point to the same current field name.

A field alias may reflect the following possibilities:

- An alternate name for the official name
- A field that has been renamed to something else
- A field that has been combined, consolidated, or merged into another field
- A field that has split into two or more new fields and the old name is no longer used.

For the combined or renamed types of aliases, both the official and alias names are on the FCML.

For alternate name aliases, the official name must be on the FCML in all cases. The alias name will be on the FCML in the following cases:

- A representative from the State agency is aware of the alias name as an alternative for the official name
- The alias name was originated on the old Form "FERC 15 "Interstate Pipeline's Annual Report of Gas Supply" respondent
- Two or more operators report the same alias.

An alternate name alias which does not meet one of these three criteria normally would not appear on the FCML.

Field Alias Records That Have Several Official Names

Certain alias field records result from the splitting of a field into two or more fields, with none of the resulting fields using the original field name. For example, Field A was split into three fields: Field B, Field C, and Field D. Fields B, C, and D would be listed as field records on the FCML. Field A would be listed as a field alias record referencing Field B, **but not** Fields C and D, and would show **SPLIT** as its reason for alias. A user desiring the names of the other fields should contact EIA or the field naming authority to obtain the names of the other fields of which Field A was formerly composed.

Fields With More Than One Name Change

The current official name may be the result of several name changes. For instance, in Oklahoma RINGWOOD NE was combined with RINGWOOD NORTH in 1965, and subsequently combined into RINGWOOD in 1966. The listing for RINGWOOD NE would show the correct field name as RINGWOOD. If multiple names were involved, the alias field name record would list only the current (correct) field name. (For example, in Oklahoma, HENNESSEY SE is an alias for HENNESSEY EAST which has since been changed first to DOVER-HENNESSEY and finally to SOONER TREND. The correct name for the alias HENNESSEY SE, HENNESSEY EAST and DOVER-HENNESSEY is SOONER TREND.) Information on the chain of successive field names may be obtained from the appropriate field naming authority or EIA.

Offshore Code Assignments

Federal Outer Continental Shelf (OCS) fields in areas other than the Gulf of Mexico are given names in the same manner as onshore fields, and are coded with the next sequential code.

Offshore fields in the Gulf of Mexico OCS receive a field name code that is determined by the lease block (or blocks) for which they are named by the Minerals Management Service (MMS). The last three digits of the code are the block number. For instance, East Cameron (offshore area prefix code 824) Block 071, receives the field code of 824071. If several blocks are included in one field, the field code reflects the number of the block for which the field is named. The other blocks included in the field are listed on the FCML as aliases to the official name. When MMS has named two fields with the same basic block number, *i.e.*, Ship Shoal Blk 113 field and Ship Shoal Blk 113A field, the prefix code from an adjacent area for which the block number could not occur is utilized for the latter designated field.

There are cases where a particular OCS lease block contains portions of two or more fields. If one of the fields is named for the block concerned, there will be an entry in the REMARKS section indicating PBI, for "Part of Block In", followed by the field code of the other included field. If the block concerned is only an alias to all the fields involved, the alias type (or reason) code will be set as MULTI to highlight that more than one field is included within the lease block.

Fields in large offshore State domain blocks in the Gulf of Mexico are assigned codes in the manner of offshore Federal fields. Special prefixes, generally unassigned prefixes for area surveys, are used for the small State block fields. A special prefix has been set aside for High Island-State (Texas). This prefix is used only with the small block fields. For State blocks that exceed 999, an unused three-digit prefix ending in 1 is used, such as SOUTH PADRE IS BLK 1068 with code 951068.

Field Naming Conventions

Use of Compass Directions in Field Names

As a general rule, a compass direction used as part of a field name is placed at the end of the name. For example, the field named West Davenport by a State source bears the name DAVENPORT WEST on the FCML. However, a field named after a known landmark, such as the town of East Davenport, bears the name EAST DAVENPORT on the FCML.

If the field DAVENPORT WEST is then combined with other wells or fields and the word District, or some similar word, is added to the name, the name will appear on the FCML as DAVENPORT WEST DISTRICT. This enables users to distinguish between two fields, one named as a result of forming a district with the DAVENPORT WEST field as its nucleus, *e.g.*, DAVENPORT WEST DISTRICT, and the other which is a new district to the west of DAVENPORT DISTRICT, *e.g.*, DAVENPORT DISTRICT WEST.

Abbreviations are generally not applied to field names provided by the field naming authorities in connection with onshore field names. Exceptions are that non-cardinal compass points, such as NW for Northwest or SE for Southeast, are always abbreviated, and when the name of a combined field has been formed using all the names of the former fields, some abbreviations are applied to fit the name with the 26-character limit. Note, however, that the four cardinal compass points are always spelled out in onshore field names.

Offshore field names in the Gulf of Mexico nearly always consist of an offshore area name and block number specified by the Minerals Management Service (MMS). Example: EAST CAMERON BLOCK 299. Also, the FCML retains the subarea identifiers such as EAST CAMERON *SOUTH ADDITION* BLOCK 299 field. Because this results in field names frequently exceeding the 26-character limit, EIA applies a standard set of abbreviations for its Gulf of Mexico field naming convention:

Block	BLK
North Addition	NA
South Addition	SA
East Addition	EA
West Addition	WA
South Extension	SX
East Extension	EX
Island	IS*

* Abbreviated when the field name exceeds 26 characters.

For example, High Island East Addition South Extension Block A376 is abbreviated HIGH ISLAND EA SX BLK A376.

Special Naming Conventions

Some States regard reservoirs as fields and keep their records on that basis (*e.g.*, Texas and New Mexico). The FCML does not follow the State conventions in these instances. In Texas, for example, State publications list PARKER (PENNSYLVANIAN) and PARKER (WOLFCAMP) as distinct fields. But PARKER is actually the name of the field using the EIA definition, and PENNSYLVANIAN and WOLFCAMP are the names of reservoirs in the field. The FCML lists only PARKER.

The MMS quarterly publication *OCS Operations Field Directory, Gulf of Mexico OCS Region* is the primary source for Federal offshore fields in the Gulf of Mexico. This publication and the MMS computer file on which it is based do not use subarea identifiers such as the *SOUTH ADDITION*, although maps of the region still carry these subareas. For example, whereas the MMS carries the name WEST CAMERON BLOCK 617, the FCML carries the field name as WEST CAMERON SA BLK 617, where SA is the abbreviation for SOUTH ADDITION.

Reused Field Names

Some States occasionally reuse field names in areas other than the original field location. This situation is handled on the FCML by indicating (OLD) and (NEW) after the field name, with each being assigned a different field code.

Invalid Field Record Procedures

Field records are removed from the FCML when they are found to be incorrect for one of the following reasons:

- The field name as it appears was never approved by the relevant naming authority; *i.e.*, it could have been a misspelled field name or the name of a producing unit, well, lease or offshore platform.
- County or State location data are incorrect.

Two separate field codes were assigned to the same field name.

Table 1. List of Authorities on Oil and Gas Field Nomenclature

State	Naming Authority	State	Naming Authority
Alabama	State Oil and Gas Board of Alabama	Nevada	Nevada Commission on Mineral Resources, Division of Minerals
